

Contents

• Day 1

Pose of the problem, anatomical framework in theory and practice

What is FORM?

Why is an adaptable and variable focus necessary for any approach of the visceral system?

Approached from the viewpoint of embryology, histology, anatomy, physiology, fluid dynamics and hemodynamics.

• Day 2

Fractal structure of Life and the importance of –dimension- consciousness.

Classic anatomical reference frame

Historic context of the anatomical reference frame

Principles of echography

• Day 3

Traps to avoid – scientific data about them

Percussion, palpation and their interpretation

Practice on the visceral system (abdomen, thorax and throat) – part 1

Verification via auscultation, percussion and palpation for everyone in practice

• Day 4

Practice on the visceral system (abdomen, thorax and throat) – part 2

Verification via medical echography control for everyone in practice
